A Powerful New Way to Trade Moving Averages in Any Market

Quantified Research Identifies High Probability Short-Term Trades with Positive Returns

Do You Trade with Moving Averages?

Moving Averages are used by hundreds of thousands of traders every day to find and follow trends. Some traders will use Moving Averages to help identify overbought or oversold markets. However, this approach often fails to identify strength and thus misses the market's largest advances.

Our Quantified Moving Average Strategy increases the probability of identifying major market turns and thus allows traders to take advantage of those opportunities. When traded correctly, this new approach to trading Moving Averages can provide traders with consistent, positive results in any market condition.

Now for the first time, we are making this trading system, a fully systematic and quantified approach to trading with Moving Averages, available to the public.

Consistent Trading Results

What you will learn with this strategy are dozens of Moving Averages strategy variations which have been correct up to over 75% of the time over a 12+ year time period starting in January 2001.

All of the strategy rules are fully detailed in the guidebook along with how to customize the strategy to create literally hundreds of variations.

Take a look at the fully quantified test results from January 1, 2001 to September 30, 2013 below.

Top 10 Performing Variations Sorted by Average Gain

Variation % P/L Win % Days Held

1	5.51%	75.63%	3.8
