Climate Change and the Future of Cities

Climate Change and the Future of Cities

We live in the age of extremes, a period punctuated by significant disasters that have changed the way we understand risk, vulnerability, and the future of communities. Violent ecological events such as Superstorm Sandy attest to the urgent need to analyze what cities around the world are doing to reduce carbon emissions, develop new energy systems, and build structures to enhance preparedness for catastrophe. The essays in this issue illustrate that the best techniques for safeguarding cities and critical infrastructure systems from threats related to climate change have multiple benefits, strengthening networks that promote health and prosperity during ordinary times as well as mitigating damage during disasters. The contributors provide a truly global perspective on topics such as the toxic effects of fracking, water rights in the Los Angeles region, wind energy in southern Mexico, and water scarcity from Brazil to the Arabian Peninsula.

Contributors: Nina Berman, Dominic Boyer, Daniel Aldana Cohen, Gökçe Günel, Cymene Howe, Colin Jerolmack, Eric Klinenberg, Liz Koslov, Andrew Lakoff, Valeria Procupez, Jerome Whittington, Austin Zeiderman
